Table 18a. Soybean Large Plot Sulfur Fertility -MagPlots.

Table 19. Spring Wheat Small Plot Sulfur Fertility - MagPlots.

Standard Management Practices for University of Minnesota Perennial Ryegrass Seed Production Research Plots

General management regime of perennial ryegrass plots on the Magnusson Research Farm:

Spring seeded ryegrass with wheat

Ryegrass seeded at 5-7#/acre with spring wheat

Sterling Blue+ 2,4-D amine (0.75 + 0.75 pint) applied in mid-September

Fertilize 30-30-30 mid-September after small grain harvest

Spike tooth harrow after fall fertilizer application to spread straw

Fertilize 110-0-0 applied early to mid-May, 300 - 600 GDD

Sterling Blue+ 2,4-D amine (0.75+0.75 pint) applied late May, 700 - 900 GDD

Tecoma or Assure II (8-10 oz) applied early June, 800 - 1,000 GDD

Apogee (8 oz) applied early heading, 1,100 - 1,300 GDD

Quilt Excel (10 oz) applied full heading, 1,700 - 1,900 GDD

Fall seeded ryegrass in wheat stubble

Ryegrass seeded at 5-7#/acre after wheat harvest into existing stubble

Pre-harvest glyphosate application to wheat , or

glyphosate applied to wheat stubble prior to seeding ryegrass.

No broadleaf application in fall but other management for fall seeded ryegrass the same as spring seeded.

General ryegrass seed harvest procedure for small research plot

Measured areas are hand cut and bagged for each individual plot.

These samples are then brought to the U of M St.Paul campus
where they are dried, threshed, cleaned and weighed.

Seed yields and other data are statistically analyzed and results summarized.

On-farm small plot research trials

All crop planting and general management are done by the grower/cooperator.

Application of treatment variables, agronomic notes and harvest by University of Minnesota personnel.

Cooperators will avoid applications of treatments involved in the study to the research plot area.

On-farm large plot trial research protocol

These experiments are conducted in fields with growers implementing all of the general field management.

Treatment variables may be applied either by the grower or University personnel.

University agronomists and grower cooperators work together to insure treatment variables are properly applied.

Plant samples, crop development observations and other applicable notes

are recorded as needed throughout the growing season usually by University personnel.

At harvest, University or local agronomists will assist the growers in collecting quality samples and recording data.

Experimental design usually consists of 2 or 3 treatment variables and 3 replicates/treatment.

Trt#	Pre-emergent post applied Trade Name	applied=	5/3/2017	Relative	Observations
			6/1/2017	seed yield*	
			Rate + Adjuvant		
1	Dual II Magnum		1.5pt. (standard)	3.3	no crop effect. Minimal weed control
2	Dual II Magnum		3pt.	3.3	Slight delay in maturity. Some broadleaf suppression. Few annual grasses
3	Callisto+ Dual II		6oz.+.5%DestinyHC+ 1.5pt.	4.7	Some crop suppression. Good general weed control
4	2,4-D LV6 + Dual II		.5pt.+ 1.5pt.	2.7	no crop effect. Good broadleaf control
5	Outlook		1pt.	4.0	slight crop suppression. Better general preemergent weed control than Prowl
6	Diuron		3pt.	3.3	more crop suppression than outlook but acceptable. Good preemergent weed control
7	Norton		2pt.	3.0	no crop effect.
8	Boundary6.5ec		1.5pt.	3.3	slight crop suppression(acceptable) but good weed control
9	Authority Elite		1.5pt.	6.0	unacceptable crop tolerance
10	EsplAnade 200SC		5oz.	4.7	marginally acceptable crop tolerance. Good general weed control
11	No treatment			3.3	heavy weed competition
12	Prowl H2O		2.5pt.	3.0	no crop effect. Some annual grass and lambsquarter control but otherwise weedy
13	Valor EZ		2oz.	2.3	no crop effect. Weedy and no observed control of weeds present
	<u>Post-emergent</u>		6/3/2017		
14	2,4-D a+ Sterling Blue		3/4pt.+3/4pt.	4.7	good crop tolerance
15	Curtail + Sterling Blue		2pt.+3/4pt.	4.3	good crop tolerance- better weed control
16	Callisto + Sterling Blue		3oz+1%COC+ 3/4pt.	6.3	moderate/some crop injury
17	Affinity tank mix + 2,4-D LV6		.8oz.+.5pt+.25%NIS	3.0	Good crop tolerance. Some volunteer ryegrass and bluegrass suppression
18	Express w/totalsol +2,4-D LV6		.3oz.+.5pt+2.5% UAN	5.7	good crop tolerance. Some ryegrass suppression
19	Atrazine		3pt.+1%COC	7.3	unacceptable crop tolerance. Good weed control except sloughgrass
20	Wolverine		13.5oz.+2.5%AMS	3.3	good crop tolerance. Cockle still present. Some bluegrass spp and redtop suppression
21	Facet L		3pt.	3.3	good crop tolerance.
22	Beacon		.4oz+.25%NIS	9.0	crop dead
23	Axial XL		1 pt.	2.7	good tolerance. Wild oat and some other grasses controlled
24	Callisto* + Sterling Blue		3oz+ 2.5%COC + 3/4pt	4.0	some crop suppression. Better than #16. however--?

*Observations/ seed yield - 1=good yield ;9=worst yield relative to other treatments

based on 2 reps at Magnusson farm and 1 replication on Estling farm

Apply with bicycle sprayer 12gpa @ 28psi

Plot size= 10'x30'

Magnusson Farms location- 3mi. West and 1mi. North of Roseau

Volunteer canola a serious problem where not controlled by early season herbicides

Estling Farms location-5mi. North and 2mi.west of Roosevelt Mn

Kernza stand thin and variable.

Weed pressure and species presence varied by location in the field
